

UL 325 Compliance

Cornell Iron Works strongly recommends compliance with UL 325 to prevent liability issues.

UL 325 applies to motor operators on door systems. For all exposed motor operators mounted at or below 8 feet in height, UL 325 states that any moving motor parts or “pinch points” such as the rotor of a motor, a pulley, a belt, gears, a drive chain, a fan or any other moving part on these operators be enclosed or guarded to reduce the risk of injury to persons.

Specify a motor cover be supplied with any rolling door product that utilizes a motor operator that will be exposed and mounted at or below 8 feet in height.

In addition, UL 325 also requires that any door that utilizes a motor operator without a sensing edge must be wired for constant pressure close and the control station must be within sight of the door.
