

DATA CENTER SOLUTIONS

FIRE-RATED COUNTER DOORS, ROLLING FIRE DOORS, SMOKESHIELD® ELEVATOR, ALARMGARD & ALARMGARD PLUS

Data center design demands foresight—planning for structures that are secure and scalable. Our commercial doors and closures are the critical finishing layer, engineered to create a sound, protected environment for your key assets.

FIRE-RATED COUNTER DOORS

Our doors create a structural barrier in both counter-height and full-height openings—effectively containing fires and preventing spread. Fire Rated Counter Doors give you confidence that your building is protected.

ROLLING FIRE DOORS

These advanced fire door systems offer industry-leading, intelligent operation that activate thermally or electrically to contain fire and smoke spread. They can even automatically reset.

SMOKESHIELD® ELEVATOR SMOKE CURTAIN

Our award-winning smoke and fire protection uses patented GuideLock™ technology to automatically seal hoistway openings after each cycle—containing smoke and preventing it from spreading.

ALARMGARD & ALARMGARD PLUS

These motor operators are designed to close a rolling fire door if an alarm signal is activated or there is a loss of power. The door can be set with a 1-10 second delay before it closes at a controlled speed of 9"-12" per second.
