

EXTREME 1024 & 300 SERIES PRODUCTS

MILLISECONDS MATTER

Milliseconds matter and lives are at risk during a fire. A non-functioning door that complicates exiting in an emergency poses a large issue in any fire station. If you are a building owner or facility manager, you already know about the importance of fire station maintenance, from dorm and day rooms to apparatus and vehicle maintenance bays.

HIGH PERFORMANCE DOORS FOR HIGH PERFORMANCE FIRE STATIONS

Our Extreme® 1024 High Performance and Extreme® 300 Series Doors are three times faster than a regular service door at 24 inches per second and can be easily retrofit into existing applications. They are also more durable and more easily replaced (either in part or as a whole) than a four-fold door. One- or two-way visibility windows are also available in both options, along with powder-coating finishes in more than 180 colors.

The Extreme® 1024 Door offers up to a million lifetime cycles, while our Extreme® 300 Series Door offers up to 300,000 cycles with the option to upgrade to 500,000 cycles.

LET OUR EXTREME SERIES TAKE CARE OF YOUR STATION
