

MICROCOIL® GRILLE

Models EPG324C & EPG324CB

ENDURANCE AND ELEGANCE FOR A PERFECT FIT

In a parking garage, you want to ensure your security closure can handle the rigors of peak times while fitting into a low profile. The Extreme High Performance MicroCoil Grille – 500K cycles can be your go-to. It features a springless design that accepts virtually all activation systems. With nearly 50% less headroom than other security grilles, the MicroCoil grille's reduced coil size allows you to maximize your clear opening space. It can be installed in new construction or retrofit into existing structures.

QUIETLY CONFIDENT

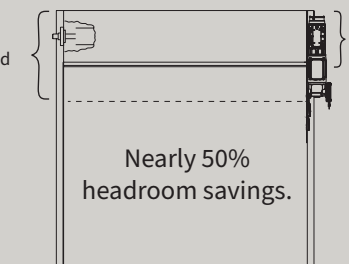

Our MicroCoil Grille quietly operates at speeds up to 24 inches per second thanks to its patented nested link system, which minimizes noise and vibration so as to not disturb visitors or neighbors as it cycles. Because MicroCoil coils tightly into ~16", it also meets ADA compliance with ease. Available in an open-air design for increased visibility and ventilation, MicroCoil comes in brick or straight patterns with curtains in mill, clear anodized, or stainless steel finishes.

LOW ON SPACE, HIGH ON PERFORMANCE

Standard rolling grille = 24" required headroom.

MicroCoil = 13" required headroom.
