

EXAM ROOM COUNTER DOOR

PATIENT CARE, REDEFINED

The versatile Exam Room Counter Door streamlines patient care. These doors are designed to reduce the need for separate spaces, allowing healthcare providers to see medical and behavioral health patients in the same exam room. Meeting the guidelines of ASHRAE and the Facility Guidelines Institute (FGI), these doors ensure impact, tamper, and ligature resistance. Counter doors are engineered to create a seamless surface facing the patient's room—covering cabinets and barring access to potentially dangerous equipment.

The door's cutting-edge configuration includes a motor positioned above the ceiling with the coil placed on top of the medical cabinet. All fasteners are concealed and the bottom bar's flat design prevents potential ligature points. This seamless solution adapts to any setting, whether it's new construction or retrofitting into existing structures.

EFFICIENCY AT ITS BEST

This flexible approach to healthcare design has several advantages. It not only helps healthcare providers save money and resources, but also prioritizes the security and well-being of patients. By implementing anti-ligature Exam Room Counter Doors, healthcare facilities can create a secure environment while maintaining an efficient and cost-effective approach to patient care.

AN INNOVATIVE APPROACH TO HEALTHCARE DESIGN
