

POWDER COAT RAL COLOR CHART

SpectraShield®

SpectraShield® Powder Coat Finish

Great Looking, Long-Lasting Finish

Choose from a palette of more than 180 standard RAL colors to incorporate your rolling doors seamlessly into your design with a SpectraShield® factory applied polyester powder coat finish. Layered on top of the standard Cornell GalvaNex™ finish, SpectraShield includes a zirconium pre-treatment followed by a baked-on polyester powder coating. Pencil hardness to be rated at H or better per ASTM D3363.

All coiling doors are subject to wear. Durability of the finish varies with the door's use, pattern and size. Limited warranty applies.

Corrosion-Resistant and Environmentally Friendly

Our powder coat finishes offer total coverage and a smooth look and feel that is tough and lasting. This finish outperforms field-applied coatings in color retention, corrosion resistance, UV stability and durability. It also contains no solvents, so it emits no polluting VOCs.

Available Products and Options

Powder coating is available for standard service doors, fire-rated coiling doors, insulated doors and counter doors as an option. In addition to the curtain, we can provide a powder coat finish to guides, bottom bars, hoods and brackets.

Your Authorized Cornell Dealer:

CycleShield™ Finish for High-Cycle Rolling Doors

Providing added durability and wear-prevention, this finish is provided as standard in gray, tan and white for Cornell's 1024 High-Cycle Doors and the Extreme 300 Series Performance Door. This specialized powder coating system features a low coefficient of friction wear-resistance to include a base coat consistent with ASTM A653 and a zirconium pre-treatment followed by a rust inhibiting baked-on polyester powder coat. Consult the factory for other RAL color availability.
