CONTINUOUS-DUTY DESIGN
The Extreme 1024 High Performance Door delivers reliable security, no maintenance (outside of routine checks) and an exceptional cycle life. It also offers extreme durability backed by a five year warranty.

SPEED YOU CAN COUNT ON
Tested to perform for more than a million cycles at an opening speed of up to 24” per second, doors operate three times faster than standard coiling overhead sectional doors.

PREFERRED APPLICATIONS
This door is a superior choice for high security needs and high-use applications (distribution, government, manufacturing, parking, transportation, etc.) Accepts virtually all activation systems.

PROVEN RETURN ON INVESTMENT
1024 Doors provide the lowest lifetime cost and lowest cost-per-cycle versus other high-performance slatted products. Plus, their cost-per-cycle savings increase dramatically when compared to standard coiling doors often used incorrectly in high-cycle openings.

ENERGY EFFICIENCY
This door can maximize energy savings by quickly sealing your building during inclement weather to minimize air exchange. The insulated model features the patented Thermiser Max perimeter sealing system – which meets ASHRAE® 90.12, 2015 IECC® and California’s Title 24 air infiltration requirements with an independently tested3 value of less than 0.3 CFM/FT².

1 MILLION CYCLES FOR HIGH USE OPENINGS

HIGH PERFORMANCE LINE Extreme® 1024 HIGH PERFORMANCE DOOR
Models EPD1024 and EPI1024 (insulated)

STANDARD COMPONENT MATERIALS AND FINISHES

HOOD (optional) - Galvanized steel with powder coat finish to match curtain. Encloses the curtain and provides weather resistance at the head of the door.

MOTOR - UL listed, SEW Eurodrive TEFC NEMA 4 variable-speed motor and patented, high-performance brake prevents curtain from free falling in the unlikely event of operator component failure.

SPRINGLESS SHAFT - Steel. Design reduces maintenance requirements and facilitates cycle capacity.

BRACKETS/COIL BOX ASSEMBLY - Steel plate brackets are part of the unitized coil box assembly with the curtain and barrel. Access hatch for ease of servicing. Drive and tension brackets both furnished with precision ball bearings.

CURTAIN - Galvanized steel with rust inhibiting CycleShield™ powder coat finish in Gray, Tan, or White. Interlocking roll-formed slats with end locks riveted to ends of alternate slats to maintain slat alignment and prevent wear. MODEL EPI1024 - Features a foamed in place insulated curtain

GUIDES - Steel angles with powder coat finish to match curtain. Self-lubricating UHMW anti-wear strips greatly reduce friction and curtain wear. Perimeter-sealing, double brush weather strip. Features up to 10 PSF operational wind load and withstands up to 20 PSF as standard.

BOTTOM BAR - Two back-to-back structural steel angles with powder coat finish in Gray, Tan or White.

OPERATION AND STRUCTURAL REQUIREMENTS

Motor operation required.
This product is supported by a guide assembly attached to the jamb construction. No additional header supports are mandated by a larger opening width.

Operational up to 10 PSF maximum wind-load

UNIQUE FEATURES

1024 DRIVE AND CONTROL SYSTEM - Control panel features wall-mounted starter. PLC controller with variable-frequency drive featuring soft-start and soft-stop at both ends of limit travel. NEMA4 rated for harsh weather environments.

MONITORED PROTECTION, EVEN AT HIGH SPEEDS - The factory-mounted UL 325-2010 (NEMA 4C) compliant photo eye sensors allow for momentary contact operation, useful in parking garages and other high-use openings. Interruption of the photo eye beam before the door fully closes causes the door to immediately halt downward travel and reverse direction to return to the open position.

SAFETYGARD LIGHT CURTAIN TECHNOLOGY - The factory-mounted light curtain attaches easily to the guide assembly and extends approximately 6’ high from the finished floor on both sides. If the door is cycling and an object passes through the curtain beams, the door will immediately halt downward travel and reverse direction to return to the open position.
