

SENSING EDGE

Entrapment Protection Device

An entrapment device prevents a motorized rolling door or grille from closing if there is an object in the opening. The upgraded design of the Sensing Edge simplifies installation, enhances functionality, and improves weather protection.

COUNTER, COUNTER FIRE DOORS & GRILLES

SERVICE, INSULATED & FIRE DOORS

FEATURES

- ▶ Primary entrapment device designed to stop the closing of a door or grille and reverse when it makes contact with an object in the opening.
- ▶ Mounted to the bottom bar of a rolling door or grille to ensure that all objects in the opening are detected.
- ▶ Flexibility of fins allows them to conform to minor irregularities of the floor in the opening to prevent dust and debris from entering the building.
- ▶ Black rubber material can be easily wiped clean and will not stain from rust and dirt.
- ▶ The sensing edge can withstand the elements, providing maximum weather protection.
- ▶ Edges are tested and listed to UL 10B as a component of the rolling steel fire door assembly.
- ▶ Sensing Edge can be upgraded with the SmartSync™ Wireless Edge Kit. This eliminates a coiling wire in the door opening in addition to offering a longer battery life, simple install, and trouble shooting.
