

SCREENGARD™

Perforated Slats

ScreenGard™ Perforated Slats are the best of both worlds—they provide the security of a rolling service door and the visibility and ventilation of a grille.

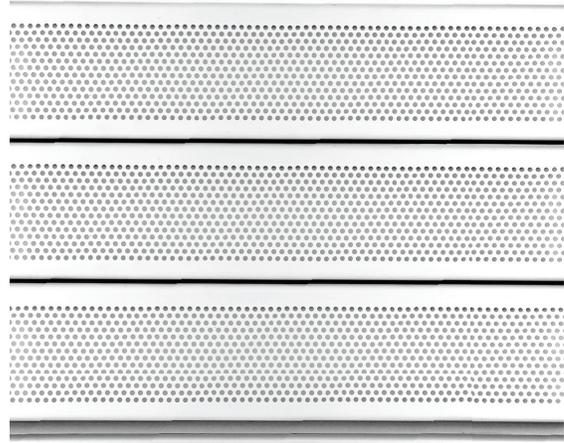

This is ideal in applications that require the rolling door to remain closed, but airflow must still be maintained throughout the building.

ScreenGard™ perforated slats are available in galvanized steel and aluminum.

GALVANIZED STEEL

ALUMINUM

| Steel | | Aluminum |
|-----------------------|--------------------------------|---------------------------|
| 20 Gauge | Service Door Slat Gauge | 16 Gauge |
| 22 Gauge | Counter Door Slat Gauge | N/A |
| Perforated Galvanized | Slat Material | Perforated Clear Anodized |
| 22% | Open Space* | 25% |
| Yes | Every Slat | Yes |
| Yes | Alternating Slats | Yes |

*Open space percentage that is provided applies to a door that has every slat perforated. Alternating slats will decrease the overall airflow by approximately half.

ScreenGard™ Aluminum Aesthetic

A SMALLER FOOTPRINT WITH MORE VISIBILITY

Sophisticated and sleek, Aluminum Aesthetic offers the visibility and airflow of a security grille with the protection of a rolling service door. The compact grille guides are 20% smaller than the standard, allowing for a more minimalist design.

ScreenGard™ Aluminum Aesthetic option is a hybrid solution for low-profile security and visibility.

SEAMLESS FINISH

An extruded aluminum bottom bar and closure plate make the door appear nearly invisible when open. ScreenGard™ Aluminum Aesthetic is perfect for retail storefronts and commercial buildings that need a smart and compact security solution.
